

****Don't look at page 2 until you have made your estimates.**

Name: _____

The Juggler

What did you notice (think about math)?

What do you wonder (think about math)?

Main Question: How many times will the juggler be able to bounce the ball off a body part before it hits the ground? He uses his feet, head, chest, and knees.

Estimate – How many times do you think he can bounce the ball off his body?

*Now turn over the sheet (or look at page 2) to see how many times he bounced the ball off of his head, foot, chest, and knees. Think about how you might use this new information.

“I know the ball hit his head ____ times, his chest ____ time, his knees ____ times, his right foot ____ times, and his left foot ____ times.”

How many times did the ball bounce off his body?

This task is about using *different* addition strategies that you learned this year. Show your strategy. Add labels to show your thinking. Use some of the tools or posters from our math page on www.mrspolay.com. Thanks for sharing your math thinking!
